OpenStack Health

is a dashboard for visualizing test results of OpenStack CI jobs.

Total Jobs

Job Failure Rate

Inputs, Outputs & DAG

- Steps are sequential
- Tasks are a Directed Acyclic Graph
- Order defined by:
 - *from*: input from another task's output
 - *runAfter*: enforced task ordering

Under the Hood

Custom Resources

CRDs: Task(Run), Pipeline(Run), PipelineResource

Services in the *tekton-pipelines* namespace:

- Webhook Service: resource validation
- Controller Service:
 - Handles inputs and outputs
 - Calculates the DAG
 - Provisions pods and containers

Custom Resource Provisioning:

- Via YAML
- Via Go API
- Labels!

Pods, Entrypoints & Volumes

Steps (of a Task):

- Containers in one POD (single node)
- Any container image
- Entrypoint re-written
- Serial execution
- Resource allocation?

TaskRun:

- Provisions a POD
- Deploys entrypoint tool
- Input/output containers
- User containers (steps)

Volumes:

- EmptyDir for workspace/home
- Tools (entrypoint)
- Secrets
- Any user ConfigMap / Volume
- (Optionally) Pipeline Share

PipelineRun:

- Several PODs, different nodes
- Shared storage: PVC or GCS

Using Kaniko

- Features:
 - Build from Context and Dockerfile
 - Unprivileged
 - Reproducible
 - Remote caching of layers
 - Base images caching (warmer)
- Dockefile?
 - Most common changes last
 - Careful with COPY/ADD
 - Remove what you don't need
